SANDIA REPORT

SAND2006-xxxx Unlimited Release Printed April 2006

Viewing GFF format SAR images with Matlab

William H. Hensley, Jr. and Armin W. Doerry

Prepared by
Sandia National Laboratories
Albuquerque, New Mexico 87185 and Livermore, California 94550

Sandia is a multiprogram laboratory operated by Sandia Corporation, a Lockheed Martin Company, for the United States Department of Energy's National Nuclear Security Administration under Contract DE-AC04-94AL85000.

Approved for public release; further dissemination unlimited.

Issued by Sandia National Laboratories, operated for the United States Department of Energy by Sandia Corporation.

NOTICE: This report was prepared as an account of work sponsored by an agency of the United States Government. Neither the United States Government, nor any agency thereof, nor any of their employees, nor any of their contractors, subcontractors, or their employees, make any warranty, express or implied, or assume any legal liability or responsibility for the accuracy, completeness, or usefulness of any information, apparatus, product, or process disclosed, or represent that its use would not infringe privately owned rights. Reference herein to any specific commercial product, process, or service by trade name, trademark, manufacturer, or otherwise, does not necessarily constitute or imply its endorsement, recommendation, or favoring by the United States Government, any agency thereof, or any of their contractors or subcontractors. Viewing GFF format SAR images with Matlab

William H. Hensley, Jr. and Armin W. Doerry SAR Applications Department

Sandia National Laboratories PO Box 5800 Albuquerque, NM 87185-1330

ABSTRACT

Sandia radar systems output their images and image products in Sandia's unique GFF file format. Sandia wishes and encourages other government agencies and research institutions to use and exploit its SAR images, and consequently is making available its Matlab GFF file reading software via this report.

ACKNOWLEDGEMENTS

This work was funded by the US DOE Office of Nonproliferation & National Security, Office of Research and Development, NA-22, under the Advanced Radar System (ARS) project.

Sandia is a multiprogram laboratory operated by Sandia Corporation, a Lockheed Martin Company, for the United States Department of Energy under Contract DE-AC04-94AL85000.

FOREWORD

During the initial development of its Synthetic Aperture Radar (SAR) systems, Sandia required image annotation beyond that achievable with standard image file formats available at the time. Consequently Sandia developed its own image file format known as GSAT File Format, or GFF. (The acronym GSAT denotes Ground-based SAR Applications Testbed.) The GFF file format has undegone several revisions as SAR development programs have come and gone, but remains Sandia's principal SAR image format. Sandia today has a large library of SAR images in GFF format.

1 Introduction

Sandia radar systems output their images and image products in Sandia's unique GFF file format. The GFF file format was developed to allow custom annotation of SAR images, as well as storing complex (magnitude and phase) images for post-processing and exploitation. Sandia's principal image analysis tool is the software package MatlabTM, available from The MathWorks. Consequently, Sandia has developed Matlab tools (programs) to read GFF files.

Sandia wishes and encourages other government agencies and research institutions to use and exploit its SAR images, and consequently is making available its Matlab GFF file reading software via this report. What follows are Matlab source listings for reading GFF files into a Matlab work space.

It should be recognized by the reader that the GFF file format is evolving, and that the following Matlab Source listings are merely a snapshot of an article in development. Consequently, this software is provided as is, with no guarantee, warranty, or other assurance of functionality or correctness for any purpose. Furthermore, users should have no expectation of support from the authors or Sandia National Laboratories. In other words, use at your own risk.

2 Matlab Source Listings

Source listings are provided for the following three files.

gffquickview.m the top-level shell routine that calls the file reader and

displays the image.

load gff 1 8b.m the GFF file reader.

read gff header 1 8b.m called by load gff 1 8b.m to read the header information.

What follows is the source listing for these files.

```

0/0 0/0 00 00

Outputs:

The MATLAB structure containing all fields of the file header. The input name is gffName (Optional) The name of the opened file. Header

returned if "FileName" is passed in.

Null string returned gffPath (Optional) The path to the opened file. 0/0 0/0

if "FileName" is passed in.

0/0

re-open it. It also can be used to find a new file without fid_out (Optional) This function will sometimes close the file and

having a handle passed in. In either case, the calling

routine can get the active file handle from this parameter.

Revisions:

08Feb2000 WHH Changed scaling back to 2^{-16} on APCAlt.

09Feb2000 WHH Changed scaling on RgChirpRate to 2^+12 from 2^-16!

Scaling on RgChirpRate now dependent on rev number.

27May2000 WHH Changed input argument to FileName and implemented.

08Jul2000 DLB/WHH Added multiple-extension support for Unix

Added default path support.

18Jul2000 WHH Now closes file if the 4th input parameter (fid out)

is NOT supplied.

21Aug2000 WHH/DLB Fixed the order of AzResolution and RgResolution

Prior to this, function did NOT meet gff 1/6 spec!

% Get a valid file, assure it's at beginning of file, and open with "endian" interpretation: % the correct

% Only use the error dialogs if this was the top-level called function!
